

Presentation Guidelines

- ☐ **You are telling a story!**
 - ☐ Your presentation should have a beginning, a middle and an end
- ☐ Start by introducing your team
- ☐ Then introduce your project
 - ☐ What have you been asked to do? i.e. summarise the brief
 - ☐ How much time have you had to work on it?
- ☐ Then explain how you approached the project
 - ☐ Did you decide on distinct roles, e.g. frontend vs backend?
 - ☐ Or did you code together, e.g. pair programming?
 - ☐ What technologies and tools did you use?
 - ☐ What processes did you go use, e.g. code reviews?
- ☐ Then show what you built
 - ☐ Start by explaining your architecture
 - ☐ Be visual -- use diagrams!
 - ☐ Explain your software architecture
 - ☐ This could be a class diagram or equivalent (formal UML not required)
 - ☐ Talk about the choices you made, i.e. the “why” as well as the “what”
 - ☐ Explain your application architecture
 - ☐ Did you use Docker/Podman to containerise your application?
 - ☐ Show a diagram of your containers and how they connect
 - ☐ Did create a Jenkins pipeline?
 - ☐ If so, show us a diagram of the pipeline flow
 - ☐ What about code quality?
 - ☐ Show us your SonarQube reports – including code coverage
 - ☐ Screen grabs are fine
 - ☐ Then give us a live demo of your project
 - ☐ **Avoid showing lines of code**
 - ☐ Unless there is a section of code that you think represents a really neat solution to a problem you encountered
- ☐ Then tell us what challenges you faced
 - ☐ Did you work well together as a team?
 - ☐ Were there any technical challenges?
 - ☐ What mistakes or assumptions did you make?
 - ☐ What would you do differently?
- ☐ Then tell us what you would do next if you had more time
- ☐ And finally – thank you for listening, any questions?
