

Project Details

Projects Suggestions

- Aim for minimum viable product
 - Pay attention to requirements and the UI
 - Then build end to end as early as possible
- Tools to use
 - Use tools you are familiar with:
 - A Git repository such as Github or bitbucket
 - Trello or similar for task management

Project Execution

- The key is to do what you do well
 - So less but quality is better
- By quality we mean:
 - Code that has automated tests
 - Code that show its clean with a SonarQube report
 - No security issues/vulnerabilities
 - Minimal/zero technical debt
- Integrate early and often
 - Keep the code working
 - Not coding for hours then trying to integrate large chunks

Project Teams and Details

- Project Teams and details can be found in a link at the bottom of the Word document where you get the course materials from
- You will need to present your projects in your teams on Friday 4th June

Execution

- This project is a key element of ESEP
- It brings everything together and enables you to demonstrate your skills as an engineer:
 - To architect a solution to a problem
 - Plan what can be achieved in a short time period
 - Implement what you plan with quality
 - Collaborate with colleagues in an agile team
- You should work in daily cycles/sprints
 - Have an aim for each day
 - Based on what has been achieved then readjust your plan if required
 - Exhibiting agility!

Presentation

- You will have 15 minutes to present plus 10 for questions
- The presentation should:
 - Introduce yourselves (individually)
 - Introduce the problem
 - Describe architecture
 - Present solution including SonarQube dashboard with
 - Test coverage and Security reports
 - Demonstration
 - Retrospective
 - What you learned
 - What went well
 - What you would do differently

Summary

- Keep things simple
 - Do small things well (code quality, tests)
 - Get an end to end slice working as a priority
 - Use Git from day one and many times a day commit code
- Plan in daily cycles
 - What you achieve today will influence what you do tomorrow
 - Use the days feedback to inform what best to do next
- Prepare for a presentation dry run Wednesday/Thursday
 - By which the structure of what you present should be in place

Some Tips

- The requirements are ambitious
 - Do not think you have to do everything in the requirements
- This is about learning to
 - Plan/estimate
 - Execute
 - Develop with quality
 - Work in teams

Final Words

- Have fun 😊

- The project should be enjoyable!
